

1. Remove both allen plugs from the oil filter housing and mount the banjo connector for the second oil circuit.

2. Dismount engine cooler on the right side (co-driver).

3. Dismount water cooler on the left side (driver).

4. Fit the delivered hoses with brackets and banjo connectors on the oil cooler. Install the delivered oil cooler. Connect the hoses as marked coloured to the oil cooler (red-red / green-green, see also picture 1).

5. Connect the adaptor with the OEM cooler hose.

6. Fit the right oil cooler (co-driver) and hoses to the oil cooler connector (red-red / green-green, see also picture 1).

7. Cut the left wheel housing for the oil hoses.
